

Mechanically Designed to Auto-Steer
behind whatever you pull it with.

SOME OF THE BENEFITS OF TRACK

-  VERY LOW RIDGING OR BERMING
AT THE HEADLANDS
-  MORE THAN 70% GROUND
PRESSURE REDUCTION VERSUS TIRES
-  MAINTAINS MORE GROUND
CONTACT AND SUPPORT ON UNEVEN
TERRAIN
-  AVAILABLE IN 16.5" OR 18"
WIDTHS

Compaction control

Our tracked carts aid in compaction control which can be a major issue with today's large equipment. The tracked cart reduces pressure applied to the ground by up to 70% over tires. In addition, the Montag system helps by following directly in the tracks of the implement that is pulling it, instead of merely wandering behind. This feature of the tracked cart aids in a controlled traffic operation.

Steering Action

Tracked carts have the same auto steer capability as our other carts on tires. The steering action occurs through the angle change of the equipment, causing one of the arms to be pushed back & the other arm to be pulled ahead. This changes the angle of the cart and steers the track.

**MONTAG AUTO-STEER CART + CAMSO TRACK
= UP TO 70% LESS YIELD ROBBING COMPACTION**
