CONFIGURATION		Implement	
Blockage System	No		
Working Position	No Workswitch		
Weigh System	Yes		
ext. Master Switch	No		

# 2 Product Configuration

Pages 51-52

CONFIGURATION		Product	
Renaming:	Cereal Rye		
Product Type	Seed		
Target Rate	50.0 lb/ac		
Delta Rate	10 %		
Calibration Factor	1.50 lbs/rev		

Calculate correct cal factor for machine. Both meters must have values added.

Use density scale to determine density.

1. The accuracy of the Montag Air Cart depends on using the correct Calibration Factor. This value is for the entire implement width.

**To find the Cal. Factor when using ft<sup>3</sup>/Rev, multiply the number of outputs for your setup by .0026. (.0026 is the starting number. This number may need to be adjusted by product or environment change.)**

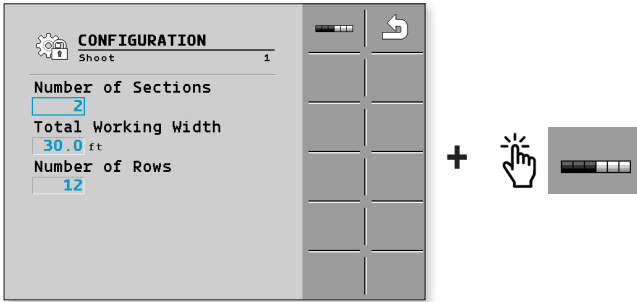

**ft<sup>3</sup>/Rev Example: 12 outputs X .0026 = .0288**

**To find the Cal. Factor when using Lb/Rev, multiply the number of outputs for your setup by .0026 times the density. (.0026 is the starting number. This number may need to be adjusted by product or environment change.)**

**Lb/Rev Example: 12 outputs X .0026 X density = 2.184**
